Review Frequency

This document shall be reviewed at least every 12 months, or sooner following a significant incident, change of operations, vessel modification, or change in applicable legislation.

Controlled Distribution

This document is a controlled distribution issued from the Franmarine document management system (DMS), which holds the master record, revision history, and approval log. The controlled digital copy is located in the vessel's SharePoint folder. Printed or downloaded copies are uncontrolled; refer to the SMS Document Register for the current revision status.

TABLE OF CONTENTS

1. PURPOSE

Fatigue risk management for MV Integrity III per Marine Order 504 (2024), Schedule 1, Clause 2(3)(e). MV Integrity III is a day vessel with no berthing accommodation.

2. RISK FACTORS

The following fatigue risk factors are relevant to the operation of this vessel:

- Work and rest hours — cumulative hours worked over a shift and over a week.
- Night or early morning work — operations outside normal daylight hours.
- Quality of rest between shifts — adequacy of sleep opportunity.
- Physical demands of the work — diving, manual handling, deck work.
- Environmental conditions — heat, cold, noise, vibration, sea state.
- Voyage length and duration of the task.
- Travel time to and from the vessel or work site.
- Cumulative fatigue over multi-day campaigns.

3. CONTROLS

- Adequate crewing and rotation to manage workload and allow rest.
- The master shall monitor crew for signs of fatigue and take action if any person is unfit to perform their duties safely.
- Crew shall self-manage their rest and report to the master if they are fatigued.
- Voyage planning shall consider crew fatigue and allow for adequate rest periods.
- The master may cancel or postpone operations if fatigue risk is unacceptable.
- Normal working day limit of 12 hours. Extensions beyond 12 hours require a risk assessment and must be recorded.
- A minimum of 10 consecutive hours of rest shall be provided in any 24-hour period.

4. FATIGUE MANAGEMENT PLAN

Franmarine Underwater Services maintains a company-wide Fatigue Management Plan (HSE-PLA-005) which sets out the detailed fatigue risk management framework, including work and rest hour limits, escalation procedures, monitoring requirements, and record-keeping obligations.

HSE-PLA-005 applies to all Franmarine operations and personnel, including those operating from this vessel. It is maintained as a separate controlled document within the Franmarine HSEQ Management System and will be included in the final SMS folder for this vessel.

The master and all crew shall be familiar with the requirements of HSE-PLA-005 before commencing operations. Work and rest hours are recorded in accordance with that plan.
