Review Frequency

This document shall be reviewed at least every 12 months, or sooner following a significant incident, change of operations, vessel modification, or change in applicable legislation.

Controlled Distribution

This document is a controlled distribution issued from the Franmarine document management system (DMS), which holds the master record, revision history, and approval log. The controlled digital copy is located in the vessel's SharePoint folder. Printed or downloaded copies are uncontrolled; refer to the SMS Document Register for the current revision status.

TABLE OF CONTENTS

1. PURPOSE

This procedure establishes the actions to be taken in the event of a medical emergency on board MV Seagull, including diving-related medical emergencies. Diving emergencies are treated as a category of medical emergency with specific additional requirements.

1.1 Regulatory Reference

Marine Order 504 (2024), Schedule 1, Clause 12. NSCV C7A (Medical Supplies). AS/NZS 2299.1:2015 Occupational Diving Operations.

1.2 Job-Specific Emergency Response Plans

This procedure provides the general medical and diving emergency response framework for all operations from MV Seagull. Individual jobs will have a job-specific Emergency Response Plan (ERP) that is custom-made to suit the task, crew, and area of operation. The supervisor shall be familiar with the job-specific ERP before work commences. Where a job-specific ERP is in place, it takes precedence over this general procedure for matters it specifically addresses (e.g. nearest hospital, helicopter landing zone, site-specific hazards, client emergency contacts, recompression facility for diving operations). This general procedure applies to all matters not covered by the job-specific ERP.

PART A — GENERAL MEDICAL EMERGENCY

2. IMMEDIATE ACTIONS

- Assess the scene for safety. Do not put yourself at risk.
- Assess the casualty using DRSABCD (Danger, Response, Send for help, Airway, Breathing, CPR, Defibrillation).
- Administer first aid within the limits of your training using the Scale G medical kit (stored in the deck storage compartments aft).
- Call Triple Zero (000) or issue a PAN PAN / MAYDAY on VHF Ch 16 depending on severity. Advise the relevant port authority (refer FUS-SMS-SGL-05J for VHF channels).
- Refer to the job-specific ERP for site-specific emergency contacts, nearest medical facilities, and evacuation routes.

3. MASTER'S ACTIONS

- Assess whether the vessel needs to divert to the nearest port or suitable location for medical evacuation.
- If the situation is life-threatening, issue a MAYDAY on VHF Ch 16 and request medical assistance or helicopter evacuation.
- If the situation is urgent but not immediately life-threatening, issue a PAN PAN on VHF Ch 16.
- Contact the East Coast Operations Superintendent to coordinate shore-side support.
- Prepare the vessel for medical evacuation if required (clear the deck, prepare to receive a rescue vessel or helicopter winch).
- If a job-specific ERP is in place, follow the evacuation and notification procedures specified in that plan.

4. MEDICAL SUPPLIES

4.1 Scale G Medication and Medical Equipment

The first aid kit carried on MV Seagull is determined by a documented risk assessment under Generic Equivalent Solution GES 2015/01 (refer FUS-SMS-SGL-02 Risk Assessment, Section 7.8). The kit is based on Scale G with risk-based exclusions of prescription-only (S4) medications. Non-scheduled alternatives are carried: paracetamol 500 mg, ibuprofen 200 mg, loperamide, hydrocortisone 1%, non-sedating antihistamine, hyoscine hydrobromide, and antacid. The kit is stored in a waterproof container in the deck storage compartments aft.

Refer to FUS-SMS-SGL-02, Section 7.8 for the complete item-by-item determination. Prepared by the HSEQ Manager and reviewed annually or when operations change.

4.2 Additional Equipment for Diving Operations

- Oxygen administration kit (demand valve and constant-flow capability) for treatment of decompression illness and near-drowning.

PART B — DIVING EMERGENCY

The following sections address diving-specific medical emergencies. All diving operations shall comply with AS/NZS 2299.1:2015. The job-specific ERP shall identify the nearest recompression facility and evacuation route for each dive site.

5. MISSING OR OVERDUE DIVER

5.1 Immediate Actions

- Note the time the diver was last observed or in communication.
- Send the standby diver to conduct a search along the diver's planned route.
- The surface team shall conduct a visual search of the surrounding area.
- Sound a recall signal (hammer blows on the hull or a pre-agreed signal).

5.2 If Not Located Within 5 Minutes

- Issue a PAN PAN or MAYDAY on VHF Ch 16.
- Contact Marine Rescue NSW and NSW Police Marine Area Command.
- Expand the search area. Deploy additional crew if available.
- Do not start the engine or move the vessel unless necessary for the search — the diver may be underneath.

6. INJURED OR UNCONSCIOUS DIVER

- Recover the diver to the surface and onto the vessel as quickly as safely possible.

- Maintain the diver's airway. Remove the regulator and mask once on the surface if the diver is unconscious.
- Commence CPR if not breathing. Administer oxygen at the highest available flow rate.
- Issue a MAYDAY on VHF Ch 16 for an unconscious or non-breathing diver.
- Arrange urgent evacuation to the nearest hospital.
- If decompression illness is suspected, administer 100% oxygen and arrange transport to the nearest recompression facility (refer to the job-specific ERP for the nominated facility; default is Prince of Wales Hospital Hyperbaric Unit, Randwick — 02 9382 3880).

7. DECOMPRESSION ILLNESS (DCI)

Symptoms of DCI may include:

- Joint pain (the bends).
- Numbness, tingling, or weakness.
- Skin rash or marbling.
- Dizziness, confusion, or visual disturbance.
- Difficulty breathing (pulmonary DCI / chokes).
- Loss of consciousness.

Actions:

- Lay the diver flat and keep still. Do not recompress in water.
- Administer 100% oxygen continuously.
- Administer oral fluids if the diver is conscious and able to swallow.
- Contact DAN (Divers Alert Network) on +61 8 8212 9242 for clinical advice.
- Arrange urgent transport to the recompression facility identified in the job-specific ERP (default: Prince of Wales Hospital Hyperbaric Unit, Randwick — 02 9382 3880).
- Provide the hyperbaric unit with: dive profile (depth, time, gas), onset time and symptoms, first aid provided.

8. EQUIPMENT FAILURE AT DEPTH

- Regulator failure — switch to alternate air source (buddy's octopus, bailout cylinder, or free-flow the primary regulator). Ascend at a controlled rate.
- BCD failure — control buoyancy by ditching weights if necessary. Ascend at a controlled rate.
- Torch failure — abort the dive. Ascend using remaining ambient light or buddy's torch.
- Communications failure — revert to line signals. Abort the dive if voice comms were the primary safety communication.

9. ENTANGLEMENT

- Stop moving. Signal for help (tug on buddy line or comms).

- Use a dive knife or line cutter to free yourself.
- If unable to free yourself, maintain calm and conserve air. The standby diver will respond.
- The standby diver shall enter the water with a knife and additional air supply to assist.

10. EMERGENCY CONTACTS

Service	Contact
Emergency (Police, Ambulance, Fire)	000
Marine Rescue NSW	VHF Ch 16 or 02 9471 8300
Relevant Port Authority	See FUS-SMS-SGL-05J
DAN (Divers Alert Network)	+61 8 8212 9242
Prince of Wales Hospital Hyperbaric Unit (Randwick)	02 9382 3880
Poisons Information Centre	13 11 26
East Coast Operations Superintendent	0452 123 732

Note: the job-specific ERP may contain additional emergency contacts relevant to the work site, client, and local area (e.g. nearest hospital, ambulance access point, alternative recompression facility, client HSE representative).

11. POST-INCIDENT

- Record all details in the vessel logbook including time, nature of injury/illness, treatment provided, and outcome.
- For diving incidents: preserve all diving equipment and do not alter settings — it may be needed for the incident investigation. Download dive computer data.
- Record diving incident details in the dive log in addition to the vessel logbook.
- Report to the East Coast Operations Superintendent immediately.
- Complete an incident report.
- Replenish the Scale G medical kit (stored in the deck storage compartments aft) and oxygen supplies before the vessel returns to service.
- Report to AMSA if the incident meets the threshold for a marine incident.
- For diving incidents, report to SafeWork NSW as required under the diving work provisions of Chapter 4, Part 4.7 of the Work Health and Safety Regulation 2017 (NSW).
- If a job-specific ERP is in place, follow the client notification and reporting requirements specified in that plan.
