Review Frequency

This document shall be reviewed at least every 12 months, or sooner following a significant incident, change of operations, vessel modification, or change in applicable legislation.

Controlled Distribution

This document is a controlled distribution issued from the Franmarine document management system (DMS), which holds the master record, revision history, and approval log. The controlled digital copy is located in the vessel's SharePoint folder. Printed or downloaded copies are uncontrolled; refer to the SMS Document Register for the current revision status.

1. ANNUAL REVIEW

A review system is maintained to verify that the SMS continues to comply with the operation requirements of Marine Order 504 (2024), Schedule 1, Clause 16. Each procedure that applies to MV Seagull is reviewed at least every 12 months to evaluate its effectiveness, and sooner if any of the triggers in Section 2 occurs.

1.1 Who Conducts the Review

The annual review is conducted by the Master of MV Seagull. It may alternatively be conducted by any of the following, provided that person holds at least the minimum master certificate of competency required to command the vessel (Coxswain Grade 3 Near Coastal (operations within 1 nm (extendable to 3 nm); a higher grade is required for greater distances); refer FUS-SMS-SGL-03 Crewing, Section 3):

- Master of the vessel
- East Coast Operations Manager
- East Coast Operations Superintendent
- HSEQ Manager
- Vessel Manager

The person conducting the review records their name and signs off the completed review in the Review Record (Section 5).

1.2 What Is Reviewed

The review evaluates the effectiveness of each procedure and the continued accuracy of the SMS, covering:

- The effectiveness of each operational and emergency procedure that applies to the vessel
- Current legislation and any changes to it — Marine Order 504, related Marine Orders, the Marine Safety (Domestic Commercial Vessel) National Law Act 2012, the NSCV, and Exemption 40 (EX02-10309)
- Any outdated or superseded standards, codes, or referenced documents relevant to the SMS
- The risk assessment and risk register, including new hazards, incidents, or hazardous occurrences since the last review
- Crew qualifications, induction, and emergency drill records
- Maintenance status and the currency of certificates and permits

All documents that form the SMS are reviewed:

- FUS-SMS-SGL-01 SMS Core Document (and 01A Master's Sign-Off)
- FUS-SMS-SGL-02 Risk Assessment and Risk Register
- FUS-SMS-SGL-03 Crewing
- FUS-SMS-SGL-04 Induction and Training (and 04A Induction Records, 04B Emergency Drill Records)
- FUS-SMS-SGL-05 Procedures (addendums 05A–05K)
- FUS-SMS-SGL-06 Emergency Plan (addendums 06A–06K)
- FUS-SMS-SGL-07 Maintenance

- FUS-SMS-SGL-08 Documentation and Logs
- FUS-SMS-SGL-09 Certificates and Permits
- FUS-SMS-SGL-10 Fatigue Management
- FUS-SMS-SGL-11 Vessel Modifications
- FUS-SMS-SGL-12 Review and Verification (this document)

1.3 How Compliance Is Verified

Compliance with the operation requirements is verified by confirming that:

- Each applicable procedure has been reviewed within the preceding 12 months and remains effective
- The SMS reflects current legislation, standards, and the vessel's certificates and exemption
- Deficiencies, hazardous occurrences, and non-conformances recorded under Section 3 have been actioned and closed
- All records required under Schedule 1 are complete and retained for at least 5 years

The completed review is signed off in the Review Record (Section 5). Any change arising from the review is entered in the Revision Record (Section 4), which records for each change a reference number, the part of the document or record changed, the date of the change, and the signature or initials of the person making it (Marine Order 504 (2024), Schedule 1, Clause 16(3) and (4)).

2. ADDITIONAL REVIEW TRIGGERS

Significant incident, vessel modification, operational change, crew change, new legislation, AMSA inspection.

3. HAZARDOUS OCCURRENCES AND NON-CONFORMANCES

Report to master immediately. Master reports to designated person. AMSA notification for serious marine incidents (ss 88, 89). Investigate root causes. Records retained 5 years.

6. SMS DISTRIBUTION AND REVISION CONTROL

The master record for all SMS documents is held in Franmarine's document management system (DMS). The DMS maintains the revision history, approval records, and distribution log, and is the system of record for version control and approval history. The controlled digital copy issued to MV Seagull is held in the vessel's SharePoint folder and is treated as a controlled distribution issued from the master record. This section defines how revisions are approved, distributed, and verified.

6.1 Revision and Distribution Procedure

When an SMS document is created or revised, the following sequence applies:

- The revision is made and approved in the DMS first; the revision status and approval are recorded in the master document register.
- The approved document is issued to the vessel's SharePoint folder, replacing the previous version, within a maximum of 14 days of approval.
- The distribution is recorded in the DMS distribution log, including document number, vessel, revision, date issued, and issued by.
- The superseded version is removed from the live vessel folder and archived in the DMS, so that only the current revision is available at the point of use.

6.2 Offline Access

The SMS may be downloaded onto a device (Supervisor/Master laptop or iPad) to provide offline access. A downloaded copy is uncontrolled and may become out of date if a revision is issued while the device is offline. Before departing, the Master shall confirm that the revision of any offline copy held on the device matches the revision of the controlled digital copy in the vessel's SharePoint folder. Where connectivity allows, the device shall be re-synchronised with SharePoint so that the current revision is held.
